

Gene essentiality confusion matrix

iYali26 E5 candidate | PO1f / SD-Leu | KO/WT < 15%

Consensus essential list only | All 1,073 model genes

Recall 23.91% | Precision 70.00% | Accuracy 74.09%

*Negative class = model genes absent from the consensus essential list (1,073 - 322 = 751).

This is a list-membership definition; it does not establish experimentally verified nonessentiality.
