

Essential-gene confusion matrix

iYali26 metadata + tRNA biomass PO1f / SD-Leu

Predicted essential: KO/WT < 0.10 Positive-only experimental reference

	Predicted essential	Predicted nonessential
Experimental essential	TP 73 22.67% of scored positives	FN 249 77.33% of scored positives
Experimental nonessential	FP N/A No negative labels supplied	TN N/A No negative labels supplied

Recall in the evaluated intersection: 73/322 = 22.67%

Reference: 1,612 positives. Scored: 322. Outside model scope: 1,290.

752 unlabelled model genes excluded from this matrix; 28 are predicted essential.
